## Description

The Mouse Estrogen Receptor Signaling RT<sup>2</sup> Profiler PCR Array profiles the expression of 84 key genes involved in estrogen receptor (ER) activation and response. Estrogen receptors are steroid hormone receptors important in development, growth, and reproduction. The 2 well-characterized ERs, alpha and beta, interact with a variety of co-regulators in the nucleus and initiate target gene transcription. ERs can also associate with the cell membrane, where they activate downstream signaling pathways. ERs play a large role in female organ cancers, especially breast cancer. The mechanisms of ER signaling are not entirely understood since tissue-specific ER responses vary depending on the agonist or antagonist. ER signaling is important in mammalian systems other than female organs. For example, ERs are involved in neurological development, and estrogens play a protective role against cardiovascular disease and osteoporosis, although the exact mechanisms of these processes are under investigation. This array includes the ERs, their co-regulators and interacting proteins, and downstream target genes. Results obtained with this array can yield insights into ER mechanisms and responses. Using real-time PCR, research studies can easily and reliably analyze the expression of a focused panel of genes involved in estrogenic signaling with this array.

For further details, consult the *RT<sup>2</sup> Profiler PCR Array Handbook*.

## Shipping and storage

RT<sup>2</sup> Profiler PCR Arrays in formats A, C, D, E, F, and G are shipped at ambient temperature, on dry ice, or blue ice packs depending on destination and accompanying products. RT<sup>2</sup> Profiler PCR Arrays in format H are shipped on dry ice or blue ice packs.

For long term storage, keep plates at –20°C.

**Note:** Ensure that you have the correct RT<sup>2</sup> Profiler PCR Array format for your real-time cycler (see table above).

**Note:** Open the package and store the products appropriately immediately on receipt.

## Array layout (96-well)

For 384-well 4 x 96 PCR arrays, genes are present in a staggered format. Refer to the *RT<sup>2</sup> Profiler PCR Array Handbook* for layout.
